

Participate in Baby Research at Vanderbilt!

Would you like to help us learn more about infants with Down syndrome?

We need your help if:

- You're the parent of an infant with Down syndrome (ages 4-36 months old)
- You'd like more information about your child's development

Participating families come to the Vanderbilt Bill Wilkerson Center for multiple appointments until they are three years old to complete developmental assessments and other experimental tasks.

Infants and toddlers will receive standardized developmental and language testing when they enter the study and at the follow-up visits. You will receive developmental information about your child at each visit, including results, recommendations, and referrals, as well as a psychological assessment for autism with a formal written report at the final visit, all at no cost.

Participants will be compensated at a rate of \$20/hour at each study visit.
